

# Template – Test Smells Refactoring Experiment

Name: Mateus Gonçalves Loiola

Project: Commons-cli, Commons-dbc and Commons-math

I'm currently working on refactoring the following test smell:

Ignored Test: 75-79

Magic number: 84-84 | 85-85

Lazy Test: 193, 172 | 243, 115, 102

My main difficulties in removing these anomalies were:

know how to organize some tests.

I'm using the following refactoring methods to remove test smells:

Ignored Test: exclusion from tests

Magic number: add the loose number in the method

Lazy Test: merging methods into a single test

From (0 to 10), how harmful is this test smell to the system? It's because ?

7, They take up unnecessary space in the test code file and thus hinder its compilation.
