

# Template – Test Smells Refactoring Experiment

**name: Antonio Elliton Dias Gomes**

**Project: Commons-cli, Commons-dbc and Commons-math**

I'm currently working on refactoring the following test smell:

Ignored Test: 63-67 and 69-73

Magic Number Test: 73-73 and 74-74

Lazy Test: 244, 128

My main difficulties in removing these anomalies were:

Organize the method in Lazy Test

I'm using the following refactoring methods to remove test smells:

Ignored Test: Method of deleting the ignore test

Magic Number Test: Add the number to the variable

Lazy Test: Join production methods in the same test

From (0 to 10), how harmful is this test smell to the system? It's because ?

6, Because it can get in the way of compiling and running other tests.
